

Who: Boys and girls, ages 5-13. Children may be eligible even if they are taking certain ADHD medications.

What: A comprehensive **evaluation** followed by evidence-based, non-medication **treatment** that includes: (1) **behavioral management training** (sometimes called “parent training”), and/or (2) **central executive training**.

You may be eligible for

No-Cost ADHD Treatment for Children and Families

as part of a clinical research study
funded by the National Institutes of Health

Behavioral management training involves working with the parent to manage and reduce their child’s ADHD behaviors. **Central executive training** involves working with the child using a computerized neurocognitive training program designed to strengthen brain abilities called “executive functions.” The central executive training program is designed to look and feel like a video game.

All eligible families will receive evaluation and treatment at no cost. Families with children ages 8-13 will receive both treatments. Families with children ages 5-7 will receive one or the other. The purpose of the study is to compare the benefits of each program and determine how to best combine these treatments.

The first step is a telephone interview (~10 minutes) that asks questions about your child’s behavior to determine initial project eligibility and provide more information about the study. For more information about the project please contact the CLC:
